Appln. No. 10/689,503 Response dated April 19, 2005 Reply to Office Action of October 20, 2004

Amendment to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- 1. (original) A metal-containing complex exhibiting improved solvent dispersibility, comprising a metal compound, which is substantially insoluble in a solvent, complexed with a dendritic polymer which is soluble in the solvent.
- 2. (original) The complex of claim 1, wherein the metal compound is a metal sulfide.
- 3. (original) The complex of claim 2, wherein the metal of the metal sulfide is cadmium, copper, zinc, lead, iron, silver, cobalt, mercury, bismouth or nickel.
- 4. (original) The complex of claim 1, wherein the metal compound is a metal halogenide.
- 5 (original) The complex of claim 4, wherein the metal of the metal halogenide is silver.
- 6. (original) The complex of claim 1, wherein the metal compound is a metal hydroxide.
- 7. (original) The complex of claim 6, wherein the metal of the metal hydroxide is silver, aluminum, copper or cobalt.
- 8. (original) The complex of claim 1, wherein the metal compound is elemental metal.
- 9. (original) The complex of claim 8, wherein the elemental metal is silver, copper, gold, iron, cobalt or nickel.
- 10. (original) The complex of claim 1, wherein the dendritic polymer is a dendrimer.

Appln. No. 10/689,503 Response dated April 19, 2005 Reply to Office Action of October 20, 2004

- 11. (original) The complex of claim 1, wherein the dendritic polymer is a polyamidoamine dendrimer.
- 12. (original) The complex of claim 1, wherein the dendritic polymer is at least a fourth generation polyamidoamine dendrimer.
- 13. (original) The complex of claim 1, wherein the metal is a copper oxide.
- 14. (original) The complex of claim 1, wherein the metal compound is uranyl phosphate.
- 15. (original) The complex of claim 1, wherein the dendritic polymer is hydrophobically modified.
- 16. (original) The complex of claim 15, wherein the dendritic polymer is hydrophobically modified by reaction with an epoxy alkane.
- 17. (original) The complex of claim 16, wherein the metal compound is a metal sulfide, and wherein the metal is copper, silver, cadmium, iron, nickel, manganese, calcium, gadolinium, or aluminum.
- 18. (new) The complex of claim 1 wherein the presence of the metal compound creates fluorescence or phosphorescence in the complex.
